

Operation: move(Worker worker, Field to)

Responsibilities: The move operation is responsible for moving a worker to a given field. (The specific game rules, such as where you can move, are not included in here because it is not the Player or Worker's responsibility.)

Preconditions:

- The game is not over.
- The Worker is already on a Field.
- The Worker being moved belongs to the Player calling this method.
- The field "to" does not have a Dome and is not occupied.

Postconditions:

- The worker's field is updated to the new "to" Field.
- The worker is removed from it's previous field.
- The worker is added to the new "to" field.
